

Rain to Roots Ambassador Program- *December Meeting*

Welcome!

- What is your name?
- Share one word that captures your vision for a future Tempe.

The Strategy – Green Stormwater Infrastructure

Benefits of GSI:

- Supports tree canopy
- Reduces temperatures
- Reduces potable water use
- Mitigates flooding
- Promotes cleaner waterways
- Creates wildlife habitat

Learn more about GSI and its benefits at Sustainable Tempe – [Green Stormwater Infrastructure](#).

Rio Salado Pkwy. & Hardy Dr.

Lemon St. & Dorsey Ln.

Rain to Roots Master Plan

- **Project Purpose**

- Expand green infrastructure & urban cooling initiatives.
- Promote cross-departmental coordination & planning.
- Identify opportunities for long-term funding.

Green Stormwater Infrastructure helps us address...

Record-breaking
Extreme Heat

Severe Drought &
Water Use

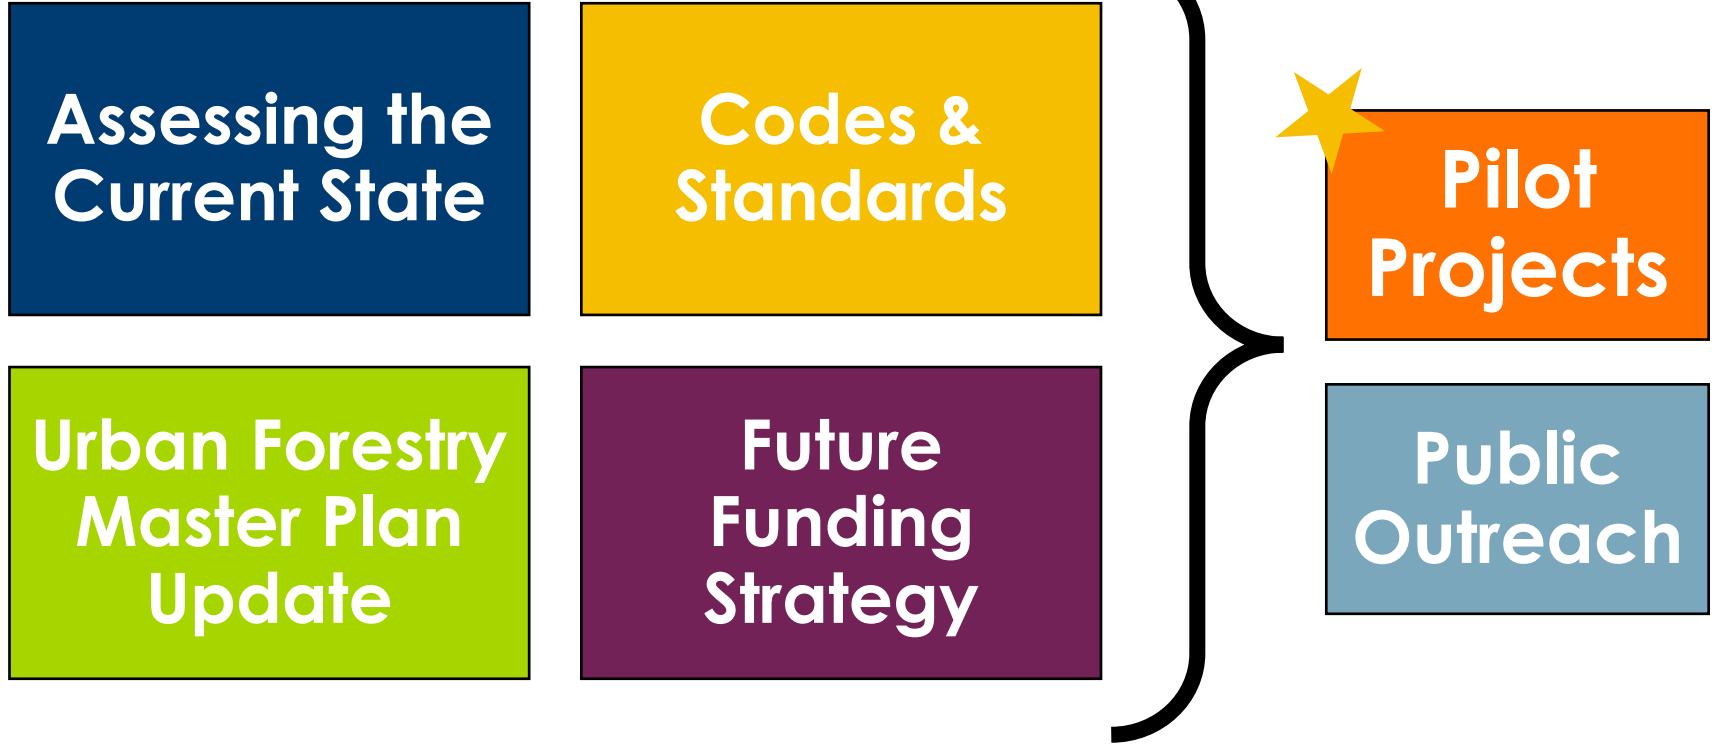

Flooding & Water
Quality Concerns

Need for Climate-
Ready Vegetation

Project Overview

Why do Pilot Projects Matter?

- *Pilot projects help us by...*
 - **Demonstrating how GSI works** in a range of settings (streetscapes, parks, multi-use paths, neighborhoods, etc.).
 - **Increasing public awareness** of GSI models & practices.
 - **Testing new codes & design standards.**
 - **Strengthening connections** between city departments.

Mill Ave. & 13th St. Median

EXISTING GSI PILOT PROJECTS IN TEMPE, AZ

LEGEND

- 1** GROVE OF ARIZONA
CITIES AND TOWNS PARK
- 2** TEMPE TRANSPORTATION
CENTER
- 3** LEMON ST. & DORSEY LN.
POCKET PARK
- 4** 12TH ST. & MILL AVE.
MEDIAN
- 5** S. COLLEGE AVENUE

1

GROVE OF ARIZONA CITIES AND TOWNS PARK: WATERSHED MANAGEMENT GROUP PILOT PROJECT

GSI features on this project include:

curb openings

- direct flow of water into bioswale,
- control sedimentation

bioswales

- slows water down,
- increase infiltration,
- improves water quality,
- increase habitat

organic mulch

- reduces urban heat island effect,
- improves soil nutrient content,
- retains water and soil moisture

VICINITY MAP

1

GROVE OF ARIZONA CITIES AND TOWNS PARK: WATERSHED MANAGEMENT GROUP PILOT PROJECT

1

GROVE OF ARIZONA CITIES AND TOWNS PARK: WATERSHED MANAGEMENT GROUP PILOT PROJECT

using organic mulch helps keep soil moist and can increase biological activity below the surface!

native plant highlight: desert milkweed is a host plant for monarch butterflies!

rock sediment trap

1 GROVE OF ARIZONA CITIES AND TOWNS PARK: WATERSHED MANAGEMENT GROUP PILOT PROJECT

ANATOMY OF A CURB CUT:

- 1 curb opening captures water before it reaches the storm drain
- 2 sediment trap allows water to initially pool to collect sediment and prolong the life of the feature
- 3 water flows into bioswale where plants continue to clean nonpoint source pollution

2 TEMPE TRANSPORTATION CENTER

GSI features on this project include:

cisterns

- water collection,
- water storage,
- water reuse,
- supplements potable irrigation

greywater collection

- reduce demand for potable water

green roof

- reduce urban heat island,
- create urban habitat,
- reduce roof runoff

VICINITY MAP

2 TEMPE TRANSPORTATION CENTER

green roofs benefit the environment...

-  sequester carbon with plants
-  reduce roof runoff
-  increase urban wildlife habitat

...and lower the annual cost of building utilities

2 TEMPE TRANSPORTATION CENTER

pedilanthus

rosemary

what's growing on this green roof?

red yucca

bear grass

dalea

3 LEMON ST. & DORSEY LN. POCKET PARK

GSI features on this project include:

curb openings

- direct flow of water into bioswale,
- control sedimentation

organic mulch

- reduces urban heat island effect,
- improves soil nutrient content,
- retains water and soil moisture

VICINITY MAP

3 LEMON ST. & DORSEY LN. POCKET PARK

I wonder why these trees are so much bigger than others along this street?

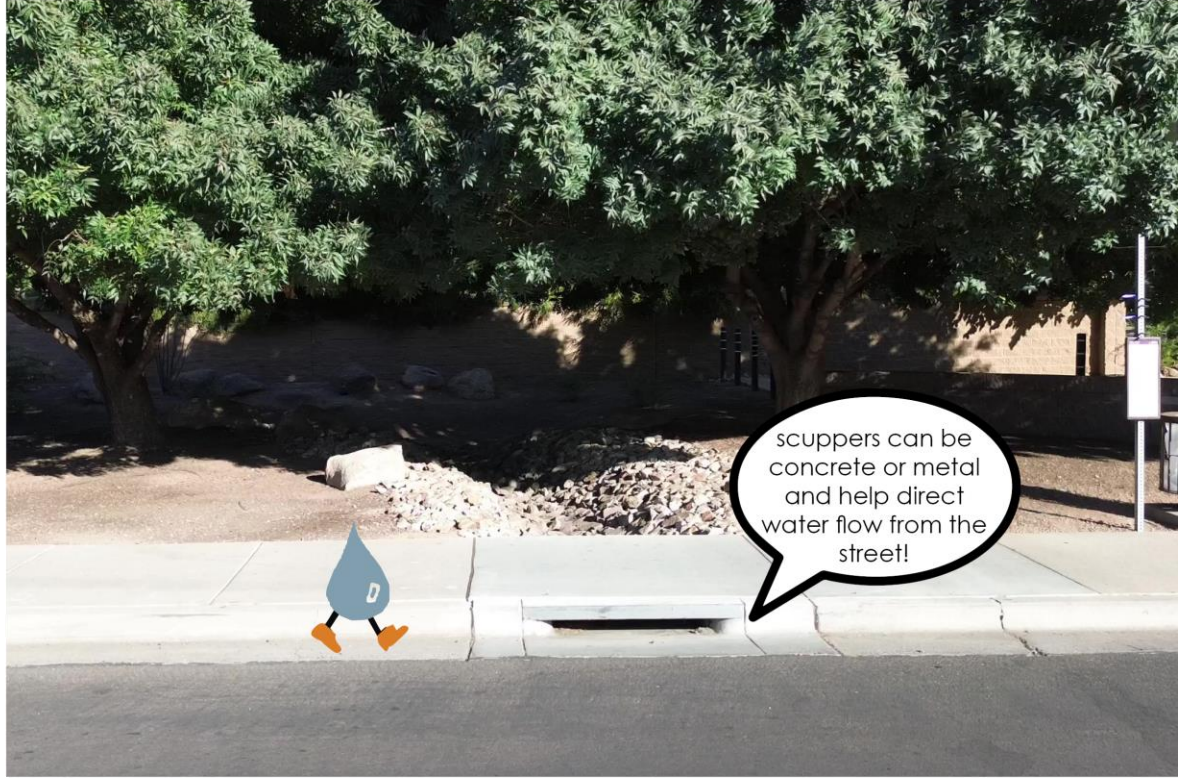

3 LEMON ST. & DORSEY LN. POCKET PARK

3 LEMON ST. & DORSEY LN. POCKET PARK

scuppers are an alternative curb opening, often used when sidewalks are attached to the road, that directs runoff into a landscape area

3 LEMON ST. & DORSEY LN. POCKET PARK

urban trees thrive when provided with the necessary soil volume and water!

water enters here ...

and fills this basin

this curb opening diverts runoff from entering the storm drain, and allows the water to saturate the landscape and enhance the street trees' canopies

4 12TH ST. & MILL AVE. MEDIAN

GSI features on this project include:

curb openings

- direct flow of water into bioswale,
- control sedimentation

bioswales

- slows water down,
- increase infiltration,
- improves water quality,
- increase habitat

organic mulch

- reduces urban heat island effect,
- improves soil nutrient content,
- retains water and soil moisture

4 12TH ST. & MILL AVE. MEDIAN

did you know: most nonpoint source pollution comes from runoff?

what are common types of nonpoint source pollution?

- auto oil, grease, & toxic chemicals
- fertilizers, insecticides, herbicides,
- bacteria & nutrients from pet waste

grasses help filter pollutants from water, cleaning it before infiltration occurs

4 12TH ST. & MILL AVE. MEDIAN

native plant highlight:
this median uses native
vegetation encouraging
pollinators to stop and
stay for awhile!

wow, organic mulch
really helps keep
this area cool in the
summer heat!

velvet
mesquite

fairy
duster

brittlebush

ocofillo

5 S. COLLEGE AVENUE

GSI features on this project include:

curb openings

- direct flow of water into bioswale,
- control sedimentation

bioswales

- slows water down,
- increase infiltration,
- improves water quality,
- increase habitat

curb modifications

- traffic calming,
- reduce urban heat island,
- reduce pollutants,
- reduce runoff

VICINITY MAP

5 S. COLLEGE AVENUE

extending the planting area into the road increases the soil volume available to trees

bioswales carry water captured through curb cuts the to trees

excess water

+

rooting space

=

increase tree and shade canopy

5 S. COLLEGE AVENUE

having a variety of plants increases urban wildlife habitat along streets

nonpoint source pollution gets filtered by vegetated bioswales before infiltrating the ground

5 S. COLLEGE AVENUE

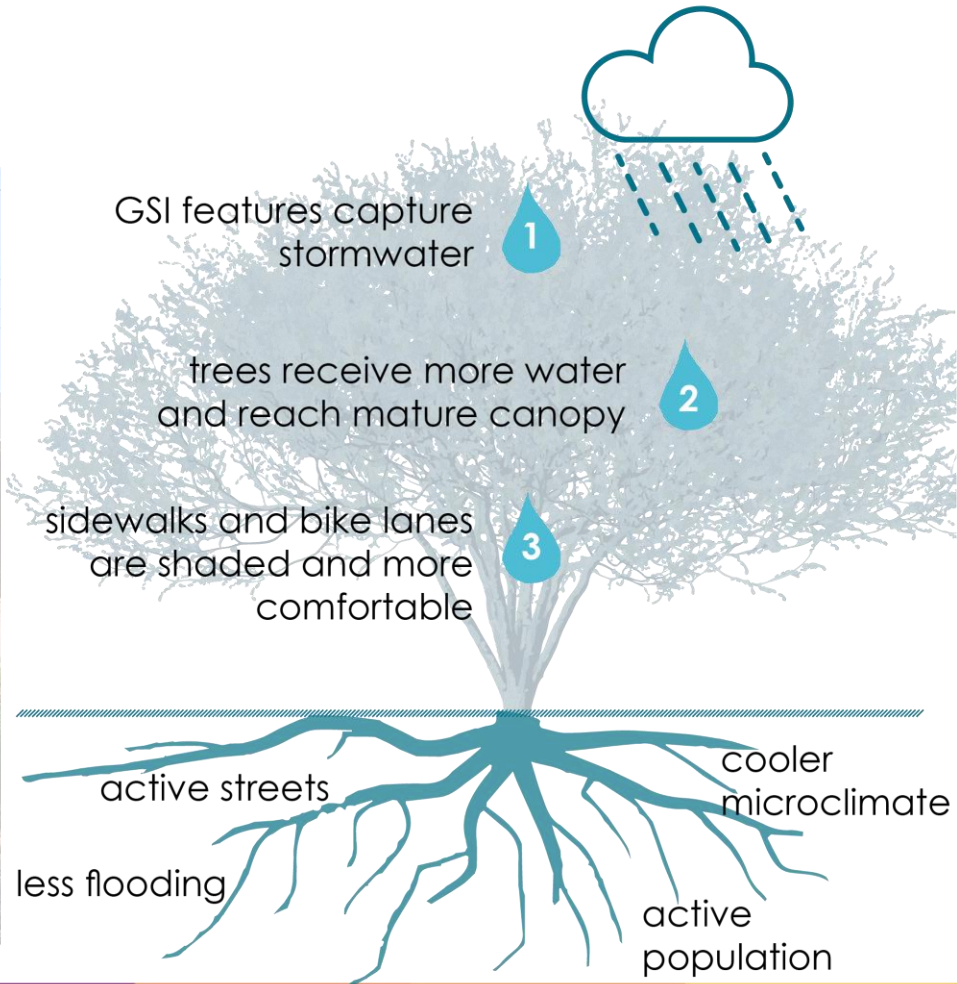

5 S. COLLEGE AVENUE

a combination of GSI and traffic-calming design approaches help support street trees' health and shade potential, making the street comfortable even in the summer heat

designing for the long-term development of the **urban canopy** using GSI provides more shade and cooler streets!

5 S. COLLEGE AVENUE

Pilot Projects → Long-term Planning

- *The Rain to Roots Master Plan (MP) will involve...*
 - **Developing data-driven strategies** for pilot project selection.
 - **Creating conceptual designs** for five pilot projects to test new codes/design standards & promote public awareness.
 - **Formalizing project selection process** as part of the Rain to Roots MP.

Ambassadors will...

- Attend site visits, discuss GSI strategies, & review conceptual designs for the five selected pilot projects.
- Co-develop a strategy for community members to suggest future GSI project sites.

Selecting Future Pilot Projects

Site Selection Methodology		
Identify Priority Areas	Inventory Possible Sites	Align with City Projects
<ul style="list-style-type: none">• Heat Exposure• Social Vulnerability• Flood Susceptibility• Existing Tree Canopy• Water Quality Needs• Walk, Bike, & Transit Scores	<ul style="list-style-type: none">• Equity• Visibility• GSI Potential<ul style="list-style-type: none">• Stormwater Capture• Tree Canopy Expansion• Space / Utility Constraints	<ul style="list-style-type: none">• Multi-use Path & Streetscape Upgrades• Stormwater Retrofit Projects• Park Upgrades• Landscape Refresh

Next Steps

- **Create** a GIS map that identifies priority areas using heat, flooding, urban forestry, and equity data.
- **Develop** a prioritization tool to compare potential projects.
- **Select** five pilot projects.
- **Coordinate** a spring site visit to selected pilot project locations.

Upcoming Ambassador Program Meetings

Meetings on the First Wednesday of the Month, 5:30-6:30 PM

.....

January: No Meeting – Winter Break

February 7th: Stormwater & Water Conservation

March 6th: Codes & Standards Review, Pilot Project Update

April 3rd: Pilot Project Site Visit (tentative)
